# Experimental Design

COoRdinated Downscaling EXperiment (CORDEX) Grid resolution of  $0.44^\circ \times 0.44^\circ$  ( $\approx 50\text{km} \times 50\text{km}$ ).

Model name	Country	Resolution	Literature
CanESM2m	Canada	$2.8^\circ \times 2.8^\circ$	Arora et al., (2011)
CNRM-CM5	France	$1.4^\circ \times 1.4^\circ$	Voldoire et al., (2013)
CSIRO-Mk3	Australia	$1.9^\circ \times 1.9^\circ$	Rotstayn et al., (2013)
IPSL-CM5A-MR	France	$1.9^\circ \times 3.8^\circ$	Hourdin et al., (2013)
MICRO5	Japan	$1.4^\circ \times 1.4^\circ$	Watanabe et al., (2011)
HadGEM2-ES	UK	$1.8^\circ \times 1.2^\circ$	Collins et al., (2011)
MPI-ESM-LR	Germany	$1.9^\circ \times 1.9^\circ$	Ilyina et al., (2013)
NorESM1-M	Norway	$1.9^\circ \times 2.5^\circ$	Tjiputra et al., (2013)
GFDL-ESM2M	USA	$2.0^\circ \times 2.5^\circ$	Dunne et al., (2012)

Dynamical downscaling: Nine ocean-atmosphere CGCMs provided lateral boundary input to the Rossby Centre regional model (RCA4)

## Variables:

Temperature  
Rainfall  
CCD  
SDII  
(ensemble means)

## 30-year periods:

1976-2005: history  
2036-2065  
2066-2095

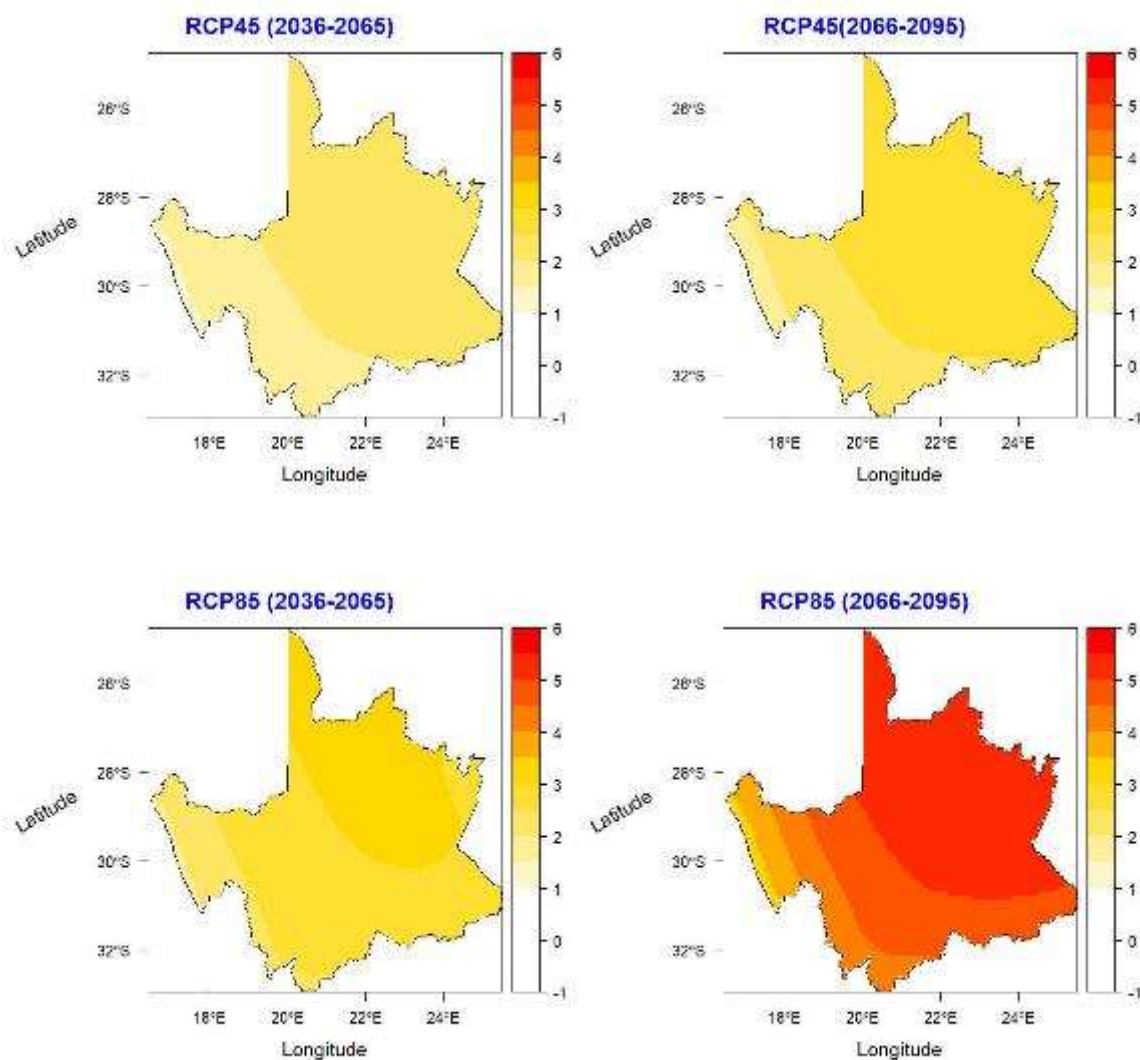

## Pathways:

RCP 4.5  
RCP 8.5

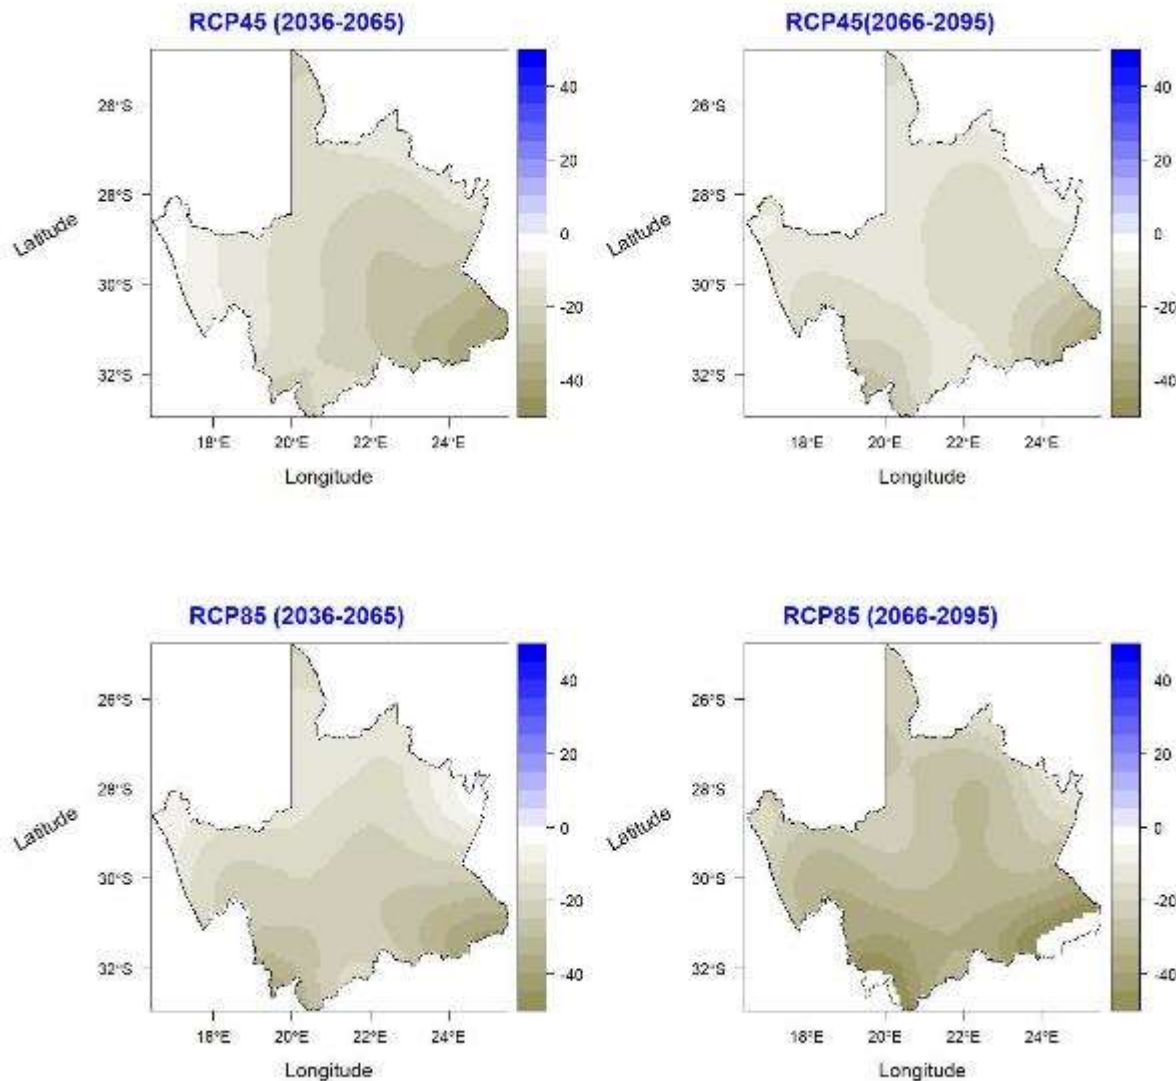

# Surface Temperature Projections: Annual

**Figure 1:** Annual mean near-surface (2m) temperature (°C) change projected for 2036-2065 (left) and 2066-2095 (right), relative to present (1976-2005), under conditions of the RCP4.5 (top row) and RCP8.5 (bottom row).

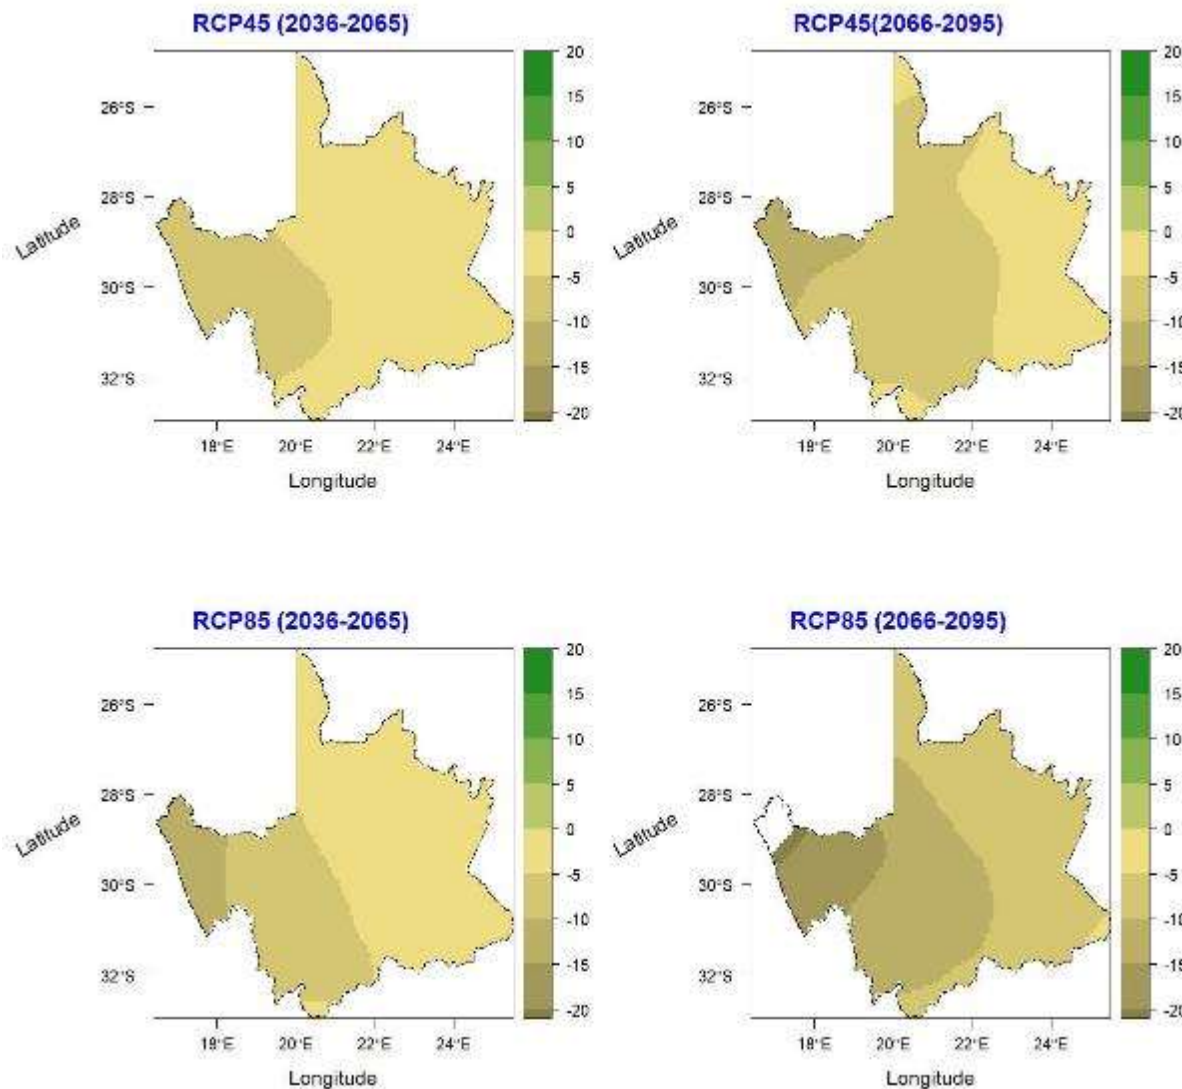

# Rainfall Projections: Annual

**Figure 6:** Annual total rainfall (mm per year) change projected for 2036-2065 (left) and 2066-2095 (right), relative to present (1976-2005), under conditions of the RCP4.5 (top row) and RCP85 (bottom row).

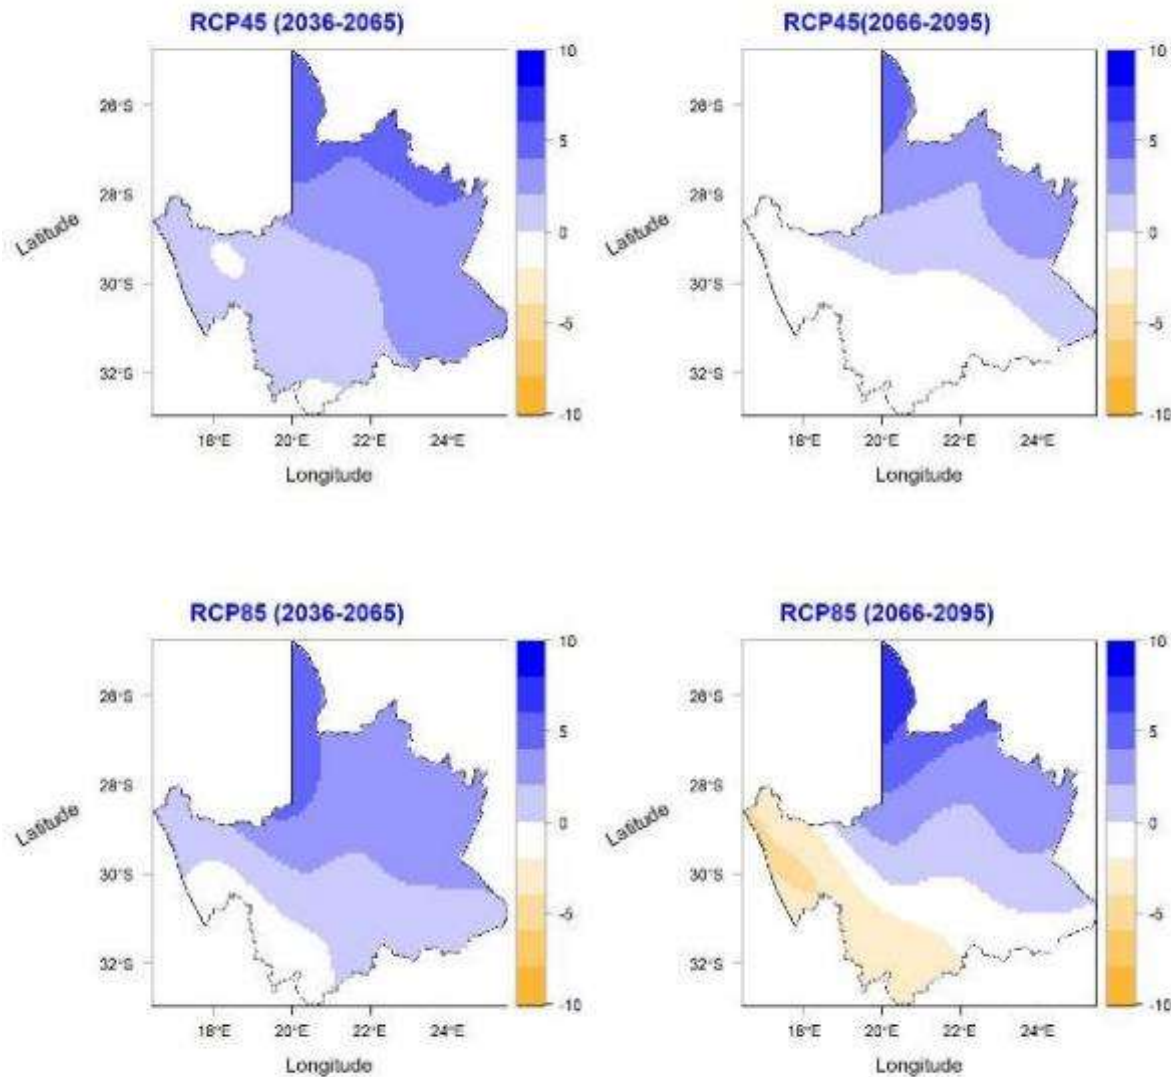

# Consecutive Dry Days Projections: Annual

**Figure 11:** Projected change in consecutive dry days for 2036-2065 (left) and 2066-2095 (right), relative to present (1976-2005), under conditions of the RCP4.5 (top row) and RCP8.5 (bottom row)

# Rainfall Intensity Projections: Annual

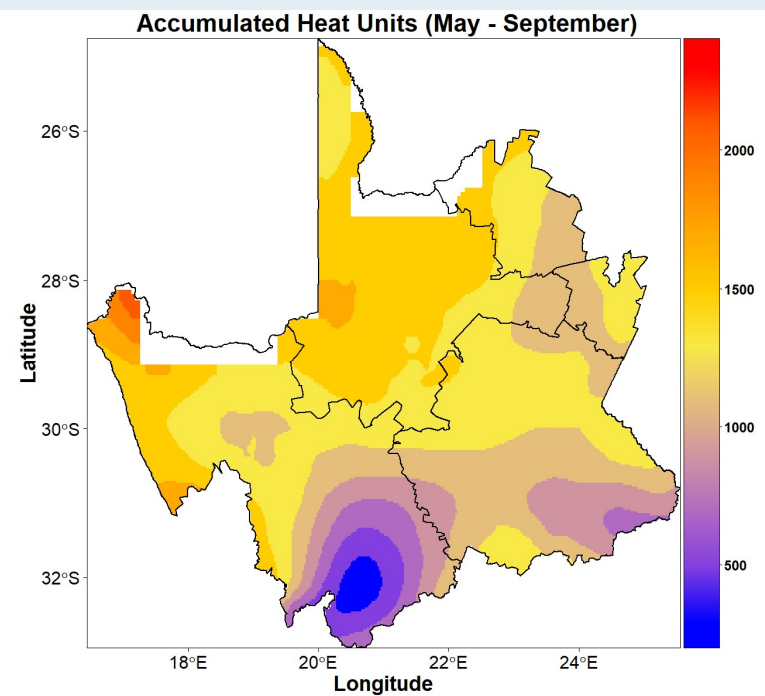

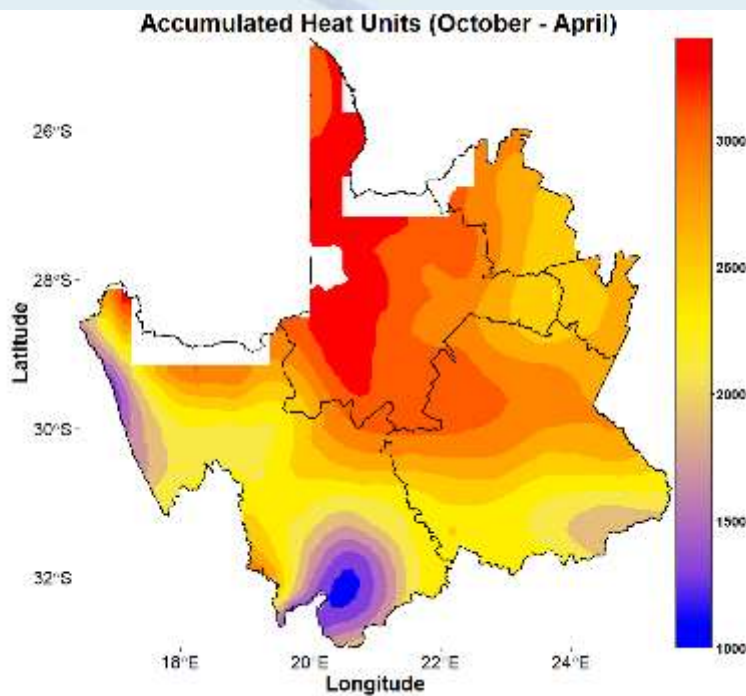

**Figure 13:** Projected change in daily rainfall intensity for 2036-2065 (left) and 2066-2095 (right), relative to present (1976-2005), under conditions of the RCP4.5 (top row) and RCP8.5 (bottom row).

# Products in Applications Research

# Agrometeorological Products

- ❑ Heat unit systems **quantify** the thermal environment of organisms
- ❑ Also known as: Growing Degree Days (**GDD**), Degree Days (**DD**), Crop Heat Units (**CHU**) or Thermal time (**TT**)
- ❑ Heat units are used:
  - To assess the suitability of a region for crop production and to select suitable hybrids and varieties
  - Estimate the growth-stages of crops, weeds, and life stages of insects
  - Predict best timing of fertilizer or pesticide application
  - Estimate the heat stress on crops

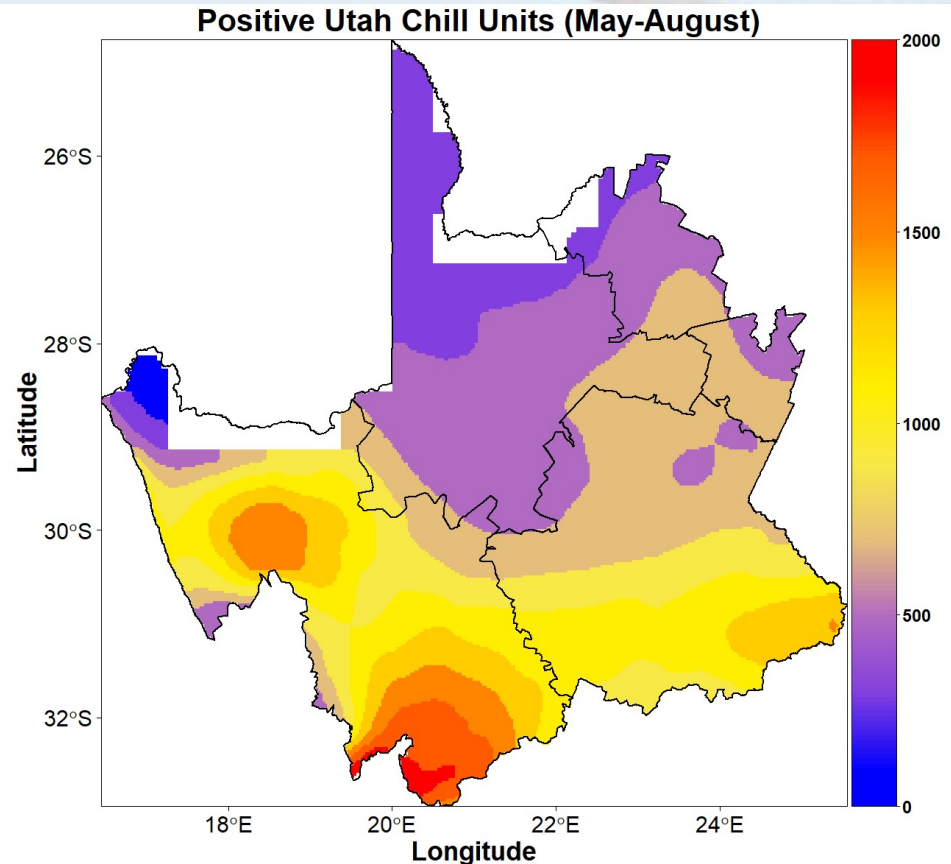

# Agrometeorological Products

- ❑ Fruit trees break dormancy after a prescribed 'sum' of winter conditions has passed.
- ❑ This sum of cold weather is known as **Winter Chill**
- ❑ Winter chill is essential for most perennial plants and differs by fruit type and variety and location

## ❑ Applications of chill units

- Predict the end of the dormancy period
- Determine time for cultivation practices
- Identify potential growing locations

# Energy Products

# Renewables in South Africa

South Africa is among the top 3 countries in the world:

- 2 500 hours of sunshine per year
- direct solar radiation 4.5-6.5 kWh/m<sup>2</sup> per day

*[Singh et al., 2017]*

**RENEWABLES MIX (%)**

# Renewables in South Africa

The South African government aims to:

- Reduce 34% of GHG emissions by 2020 and 42% by 2025

*[Herbst and Rautenbach, 2005]*

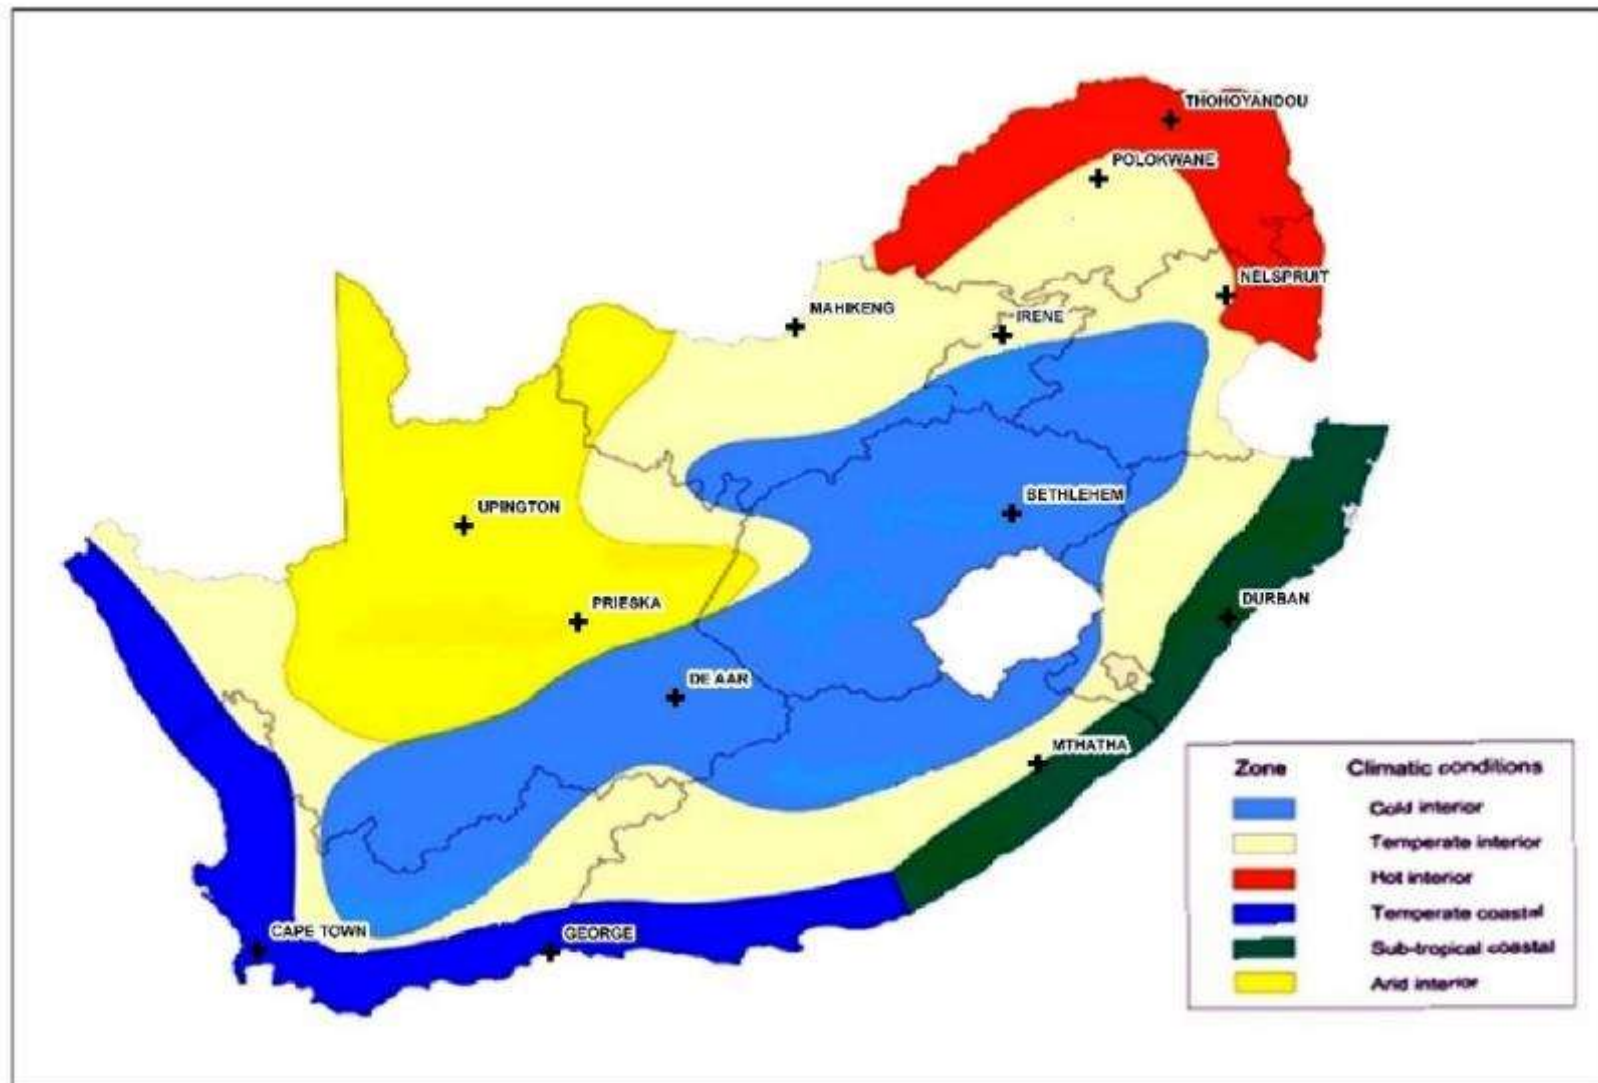

- Increase electricity generation from renewables from 9% to 40% by 2030, namely CSP, solar PV and biomass

*[Craig et al., 2017]*

- Support Independent Power Producers (IPPs) by putting forth plans and policies to increase their share of supply (currently ~90% Eskom, 10% IPPs)

*[Singh et al., 2017]*

# SAWS Solar Radiation Network

# Health Products

# Heat Stress & Temperature Extremes

- Heat is 1 of the 9 identified potential health risks due to climate change in South Africa (DEA,2014).
- Heat is known as a "silent" killer because it's not a visible threat like fires and floods.
- Heat stress occurs when your body cannot cool itself enough to maintain a healthy temperature (37 °C).
- Ten years (2006-2016) heat stress assessment based on Apparent Temperature AT (°C) for the Northern Cape show an increase in number of frequencies through the reference risk categories: **Caution (27-31°C)**, **extreme caution (32-38°C)**, **danger (39-50°C)** and **extreme danger (51+°C)** and well as **normal (>26°C)**.

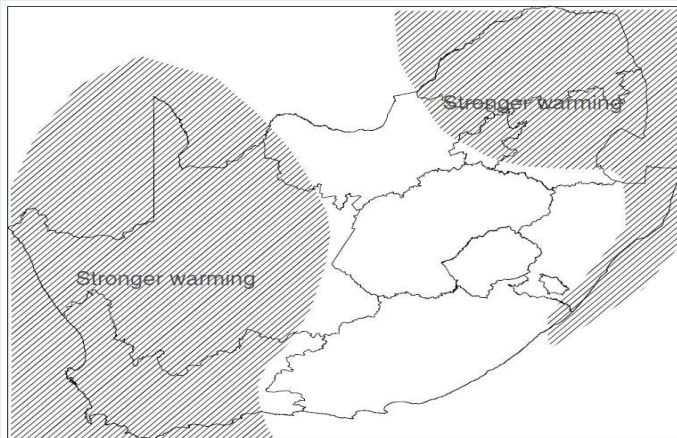

SAWS procured 4 biometeorological stations, Three stations have been deployed in Limpopo, **Northern Cape** and Gauteng. The third station will be deployed in North West.

The stations will measure air temperature (°C), relative humidity (%), wind speed (ms<sup>-2</sup>) and direction at 2 m above ground, rain (mm), solar radiation (Wm<sup>-2</sup>), erythral irradiance (Wm<sup>-2</sup>) that measure ultraviolet radiation (UVB), as well as a black globe sensor that measure the globe temperature used in the assessment of heat stress. The station also consists of a Vaisala air quality sensor-AQT 420 that measures air quality pollutants, including Nitrogen dioxide (NO<sub>2</sub>), Sulphur dioxide (SO<sub>2</sub>), Carbon monoxide (CO) and Ozone (O<sub>3</sub>), and Particulate Matter (PM<sub>2.5</sub> and PM<sub>10</sub>).

# Heat Stress & Temperature Extremes

- Northern Cape is one of the regions in the country experiencing temperature extremes.
- Study on temperatures trends (1962-2009) show that Northern Cape (as well as the Northeast) is experiencing stronger warming.

- During the exceptionally warm summer season of 2015/16, the southern African region experienced its warmest summer in recorded history.
- Three temperature records were broken across the Northern Cape, with temperatures exceeding 40 degrees. Augrabiesfalls was 1.4 °C shy from reaching 50°C.

Station Name	No of reoccurrences	Highest Max Temperature record	Latest Date	Provinces
AUGRABIESFALLS	14	48.6 °C	2016-01-05	NC
TWEE RIVEREN	13	45.6 °C	2016-11-30	WC
TOSCA	11	46.0 °C	2016-01-06	NW
ADDO ELEPHANT PARK	10	46.6 °C	2016-02-01	EC
REDELINGSHUYS-AWS	9	46.0 °C	2012-01-16	WC
NGQURA - COEGA	9	45.0 °C	2017-02-28	EC
LAINGSBURG	8	43.0 °C	2016-02-01	WC
MALMESBURY	7	44.8 °C	2015-12-30	WC
GIYANI	7	42.9 °C	2015-12-12	LMP
URBINGTON WD	7	45.3 °C	2016-01-05	NC
WARMBAD TOWOLOMBA	6	43.7 °C	2016-01-07	LMP
CLANWILLIAM	6	46.0 °C	2010-02-20	WC
ROBERTSON	6	44.7 °C	2015-12-30	WC
THABAZIMBI	6	44.7 °C	2016-01-07	LMP
LADISMITH	6	43.6 °C	2010-02-09	WC
MIBAZWANA AIRFIELD	6	42.4 °C	2016-02-20	KZN
VREDENDAL	5	48.4 °C	2015-10-27	WC
SKUKUZA	5	45.1 °C	2016-12-22	MP
PATENSE	5	45.0 °C	2010-02-09	EC
VRYBURG	5	43.7 °C	2016-01-06	NW
PORTERVILLE	5	43.1 °C	2015-12-30	WC
MARKEN	5	42.9 °C	2016-01-07	LMP
LEVUBU	5	42.5 °C	2015-11-02	LMP
OUDESTAD	5	42.5 °C	2016-01-07	LMP
CAPE TOWN - ROYAL YACHT CLUB	5	42.4 °C	2015-03-03	WC
NEUWOUDETVILLE	5	42.4 °C	2016-02-01	NC

Weather Service

# Conclusion

- The SAWS Research and Development is dedicated to contribute to the mandate of producing state of the art research which are Taylor-made and reaching the 57 million people in South Africa with efforts to creating a WeatherSmart nation.
